# Measurement & Geometry Year 5

© Created by Sharon Ritchie September 2011

Teacher: _____     Date: _____

## Cross Curriculum Priorities

- Aboriginal and Torres Strait Islander histories and culture
- Asia and Australia's engagement with Asia
- Sustainability

## General Capabilities

- Literacy
- Numeracy
- ICT Competence
- Critical and Creative Thinking
- Intercultural Understanding
- Personal and Social Competence
- Ethical Behaviour

---

### First Steps Links

**SPACE**

**Represent Location**
- ☐ KU 1 Pg.
- ☐ KU 2 Pg.
- ☐ KU 3 Pg.

**Represent Shape**
- ☐ KU 1 Pg.
- ☐ KU 2 Pg.
- ☐ KU 3 Pg.

**Represent Transformation**
- ☐ KU 1 Pg.
- ☐ KU 2 Pg.
- ☐ KU 3 Pg.
- ☐ KU 4 Pg.

**Reason Geometrically**
- ☐ KU 1 Pg.
- ☐ KU 2 Pg.
- ☐ KU 3 Pg.
- ☐ KU 4 Pg.

**SPACE**
**Understand Units**
- ☐ KU 1 Pg.
- ☐ KU 2 Pg.
- ☐ KU 3 Pg.
- ☐ KU 4 Pg.
- ☐ KU 5 Pg.
- ☐ KU 6 Pg.
- ☐ KU 7 Pg.
- ☐ KU 8 Pg.

### Year 5 Achievement Target

By the end of Year 5, students solve simple problems involving the four operations using a range of strategies. They check the reasonableness of answers using estimation and rounding. Students identify and describe factors and multiples. They explain plans for simple budgets. Students connect three-dimensional objects with their two-dimensional representations. They describe transformations of two-dimensional shapes and identify line and rotational symmetry. Students compare and interpret different data sets.

Students order decimals and unit fractions and locate them on number lines. They add and subtract fractions with the same denominator. Students continue patterns by adding and subtracting fractions and decimals. They find unknown quantities in number sentences. They use appropriate units of measurement for length, area, volume, capacity and mass, and calculate perimeter and area of rectangles. They convert between 12 and 24 hour time. Students use a grid reference system to locate landmarks. They measure and construct different angles. Students list outcomes of chance experiments with equally likely outcomes and assign probabilities between 0 and 1. Students pose questions to gather data, and construct data displays appropriate for the data.

|---|---|---|
| **LOCATION AND TRANSFORMATION** | **LOCATION AND TRANSFORMATION** | **LOCATION AND TRANSFORMATION** |
| Use simple scales, legends and directions to interpret information contained in basic maps. *[ACMMG090]*<br><br>Create symmetrical patterns, pictures and shapes with and without digital technologies. *[ACMMG091]* | Use a grid reference system to describe locations. Describe routes using landmarks and directional language. *[ACMMG113]*<br><br>Describe translations, reflections and rotations of two-dimensional shapes. Identify line and rotational symmetries. *[ACMMG114]*<br><br>Apply the enlargement transformation to familiar two dimensional shapes and explore the properties of the resulting image compared with the original. *[ACMMG115]* | Investigate combinations of translations, reflections and rotations with and without the use of digital technologies. *[ACMMG142]*<br><br>Introduce the Cartesian co-ordinate systems using all four quadrants. *[ACMMG143]* |
| **GEOMETRIC REASONING** | **GEOMETRIC REASONING** | **GEOMETRIC REASONING** |
| Compare angles and classify them as equal to, greater than or less than a right angle. *[ACMMG089]* | Estimate, measure and compare angles using degrees. Construct angles using a protractor. *[ACMMG112]* | Investigate, with and without digital technologies, angles on a straight line, angles at a point and vertically opposite angles. Use results to find unknown angles. *[ACMMG141]* |

---

## PROFICIENCY STRANDS

### Understanding

Students build a robust knowledge of adaptable and transferable mathematical concepts. They make connections between related concepts and progressively apply the familiar to develop new ideas. They develop an understanding of the relationship between the 'why' and the 'how' of mathematics. Students build understanding when they connect related ideas, when they represent concepts in different ways, when they identify commonalities and differences between aspects of content, when they describe their thinking mathematically and when they interpret mathematical information.

☐

### Problem Solving

Students develop the ability to make choices, interpret, formulate, model and investigate problem situations, and communicate solutions effectively. Students formulate and solve problems when they use mathematics to represent unfamiliar or meaningful situations, when they design investigations and plan their approaches, when they apply their existing strategies to seek solutions, and when they verify that their answers are reasonable.

☐

### Fluency

Students develop skills in choosing appropriate procedures, carrying out procedures flexibly, accurately, efficiently and appropriately, and recalling factual knowledge and concepts readily. Students are fluent when they calculate answers efficiently, when they recognise robust ways of answering questions, when they choose appropriate methods and approximations, when they recall definitions and regularly use facts, and when they can manipulate expressions and equations to find solutions.

☐

### Reasoning

Students develop an increasingly sophisticated capacity for logical thought and actions, such as analysing, proving, evaluating, explaining, inferring, justifying and generalising. Students are reasoning mathematically when they explain their thinking, when they deduce and justify strategies used and conclusions reached, when they adapt the known to the unknown, when they transfer learning from one context to another, when they prove that something is true or false and when they compare and contrast related ideas and explain their choices.

☐
